

MYCOLOGY INTERNSHIP

We seek a motivated undergraduate student in a relevant field to work on a mycology restoration research project we are conducting in conjunction with Dr. Tanya Cheeke of Washington State University in the Tri-Cities. The selected student will assist ongoing research being conducted in the Cheeke Lab to develop the technical skills to develop and conduct their own research project on the utilization of particular fungal taxa on Palouse prairie restoration. This unique internship will be available for the summer of 2019 and provide the selected student with lab, field, experimental design, grant writing and technical writing experience.
